Inspections Portmanteau Group Description

Inspections Portmanteau Group

A portmanteau is a means whereby multiple record types can be included in a single group. In IDEA portmanteaus are necessary because IDEA cannot support files with data structures of more than two levels of hierarchy. A portmanteau includes similar record types (often parent and offspring records) where certain elements can be keyed for the entire group. In the Inspections group there are actually three record types: Inspection Schedule records, Inspection records, and Pretreatment Inspections records.

In PCS, each of the record types in the Inspections group has a unique inspection date field and inspection type field. Two inspection record types have an inspection code field in PCS. In IDEA the inspection date, type, and code fields were combined and given the same data element names so that they may serve as keyed fields for the group. The keyed fields of portmanteau groups in IDEA take on slightly different meanings depending on the record type that it belongs to. For example, INSPCOD identifies the inspector that performed the inspection when it is part of an Inspection record, whereas INSPCOD identifies the inspector *scheduled* to perform an inspection when it is part of an Inspection Schedule record.

In order to find out which record type you are looking at, you must assess which keyed elements are present or absent for the record. Because key fields are required fields, it is possible to determine the record type by observing which key fields are present and which are absent. The table below lists the key fields that will appear for each record type. Additionally, there are non-keyed fields unique to each record type. However, as non-keyed fields are not required fields, record types may only be determined by the presence of a non-keyed field, but not by its absence.

Inspections Group		
Record	**Keyed**	**Non-Keyed**
Inspection Schedule	INSPDTE, INSPTYP, INSPCOD, SIDT	
Inspection	INSPDTE, INSPTYP, INSPCOD	ICOM
Pretreatment Compliance Inspections/Audit Inspections.	INSPDTE, INSPTYP	SIUS, CIUS, NOCM, PSNC, NOIN, MSNC, SNIN, PTIM, ADLL, EVLL

The following are the common keyed fields for the Inspections group. Below each IDEA-derived key element name are the native PCS data elements that are included in the IDEA element.

INSPDTE:

DTIA (PCI/Audit Date) The date of the Pretreatment Compliance Inspection or Pretreatment Audit. (PCI/Audit records)

DTIN (Inspection Date) The date of the actual inspection. (Inspection Records)

SDTI (Scheduled Inspection Date) The date that an inspection was actually performed. This field is derived from DTIN and stored in the inspection schedule record. (Inspection Schedule)

INSPTYP:

IATY (Inspection Type) Identifies the type of inspection performed. (PCI/Audit)

TYPI (Inspection Type) A field that identifies the type of inspection performed. (Inspection)

STYP (Scheduled Inspection Type) A one-character alphanumeric field representing the type of inspection that is scheduled. (Inspection Schedule)

INSPCOD:

INSP (Inspector Code) Identifies the type of inspector who performed the inspection. (Inspection)

SINS (Scheduled Inspector Code) Identifies the type of inspector scheduled to perform the inspection. (Inspection Schedule)

Effluents Portmanteau Group Description

Effluents Portmanteau Group

A portmanteau is a means whereby multiple record types can be included in a single group. In IDEA portmanteaus are necessary because IDEA cannot support files with data structures of more than two levels of hierarchy. A portmanteau includes similar record types (often parent and offspring records) where certain elements can be keyed for the entire group. The Effluents group includes three types of records: Pipe Schedule (PFK) records, Pipe Limits (PLK) records, and Pipe Measurements (MVK) records.

The Keyed elements for the Effluents group include RPTDSGR, PIPESET, LMTTYPE, PARAMTR, MONLOCN, SEASON, MODNUM, and MVDT. In order to find out which record type you are looking at, you must assess which keyed elements are present or absent for the record. Because key fields are required fields, it is possible to determine the record type by observing which key fields are present and which are absent. The table below lists the key fields that will appear for each record type. Additionally, there are non-keyed fields unique to each record type. However, as non-keyed fields are not required fields, record types may only be determined by the presence of a non-keyed field, but not by its absence.

Effluents Group		
Record	**Keyed**	**Non-Keyed**
Pipe Schedule (PFK)	RPTDSGR, PIPESET	FLSD, FLED, MLSD, MLED, ILSD, ILED, STRP, NRPU, REUN, PIAC, PIDT, STSU, NSUN, SUUN, STSS, NSUS, SUUS, NSUB, OUTT
Pipe Parameter Limits (PLK)	RPTDSGR, PIPESET, LMTTYPE, PARAMTR, MONLOCN, SEASON, MODNUM	LTYP, LCMX, LCAV, LCMN, LCUC, LQMX, LQAV, LQUC, LQAS, LQXS, LCMS, LCAS, LCXS, LCMO, LCAO, LCSX, LCSA, LCSM, LCSC, LQSX, LQSA, LQSC, ELSD, ELED, COLS, COP, PLFN, STBA
Pipe Measurements/Violations (MVK)	RPTDSGR, PIPESET, LMTTYPE, PARAMTR, MONLOCN, SEASON, MODNUM, MVDT	MVIO, ENFI, NODI, MQAV, MQMX, MCMN, MCAV, MCMX, VQAV, VQMX, VCMN, VCAV, VCMX, VWCS, SNDE, SRDE, SNCE, SRCE, VIND, DMRR, DMDL

The following are the common keyed fields for the Inspections group. Below each IDEA-derived key element name are the native PCS data elements that are included in the IDEA element.

RPTDSGR:

DRID (Report Designator) A one-character code used to designate a particular grouping of parameters for reporting purposes. (Schedule)

PLRD (Limit Report Designator) A one-character code used to designate a particular grouping of parameters for reporting purposes. Links a limit record to a pipe schedule record. (Parameter Limits)

VDRD (Measurement/Violation Report Designator) A one-character code used to designate a particular grouping of parameters for reporting purposes. Links measurement/violation record to a limit record. (Measurements/Violations)

PIPESET:

PIPQ (Pipe Set Qualifier) A one-digit code used to provide unique linkage between Pipe Schedules, Parameter Limits and Measurements/Violations. (Schedule)

LIPQ (Limit Pipe Set Qualifier) A one-digit code used to provide unique linkage between Pipe Schedules, Parameter Limits, and Measurements/Violations. (Parameter Limit)

VIPQ (Measurement/Violation Pipe Set Qualifier) A one-digit code used to provide unique linkage between Pipe Schedules, Parameter Limits, and Measurements/Violations. (Measurement/Violation)

LMTTYPE:

LTYP (Limit Type) Period during which a specific set of parametric limits to the pertinent set of limits dates on the corresponding Pipe Schedule limits apply. Relates record. (Parameter Limits)

VLIM (Measurement/Violation Limit Type) The limit type of the Measurement/Violation Record. (Measurements/Violations)

PARAMTR:

PRAM (Parameter Code) A five-digit parameter code. Usually the STORET parameter code; but for toxicity testing parameters, a PCS-devised parameter code. (Parameter Limits)

VPRM (Measurement/Violation Parameter) The parameter code of the measurement violation. (Measurements/Violations)

MONLOCN:

MLOC (Monitoring Location) The monitoring location at which the monitoring requirement (and effluent limit, if limited) applies. One parameter may have several monitoring location requirements pertaining to the same pipe. (Parameter Limit)

VMLO (Measurement/Violation Monitoring Location) The location where the measurement sample was taken. (Measurement/Violation)

SEASON:

SEAN (Season Number) Is used to enter different seasonal limits for the same parameter within a single limit period. (Parameter Limit)

VSEA (Measurement/Violation Season Number) The effluent season number of the measurement or violation. (Parameter Limit)

MODNUM

MODN (Modification Number) A unique number that identifies a limit or modification to the limit to which it applies. (Parameter Limit)

VMOD (Measurement/Violation Modification Number) The modification number on the measurement/violation record that matches the corresponding parameter limit record. (Measurement/Violation)
